

Wedge supports

Item description/product images

Description

Material:

Carbon steel and ductile iron.

Version:

Tempered and black oxidised.

Wedge faces fine machined.

Note:

Fine adjustment by knurled screw or Allen key. Therefore vertical movement without lateral displacement. Especially suitable for marking or machining heavy parts. Ball handle K1961-01 is added to each height wedge.

H min is reached by removing the baseplate.

Drawing reference:

1) centring hole for K1961
