

Rigid couplings one-piece

Item description/product images

Description

Material:

Steel 1.0718.
Stainless steel 1.4305.

Version:

Steel black oxidised.
Stainless steel bright.

Note:

Rigid couplings transmit high torques without rotational play. They are used where there are no shaft displacements or alignment errors. Wear-free and maintenance-free. Screws secured to avoid vibration induced loosening.

The maximum torque transmission can only be achieved through optimal installation and correct shaft dimensions.

Maximum speed 4000 rpm.

Temperature range:

-40 °C - +175 °C.

On request:

Other dimensions.
